

Tango Block

Available in NSW/ACT, QLD

adbri MASONRY
working together

Recommended For

Garden Edging

Freestanding Walls

Retaining Walls

Fences

Bench Seats

Piers

Fire Pits

This one block does it all!

Use your creativity and bring your backyard to life with the double sided DIY seating wall, Tango! Frame courtyard areas, create piers or even build fences using the one block! For walls in a weekend, build directly on top of an existing pavement then cap the wall with Adbri pavers!

COLOUR OPTIONS

Oatmeal

Charcoal

Due to natural variations in raw materials used, colour tones may vary from batch to batch.

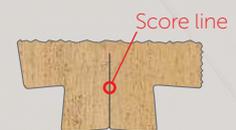

Whilst these swatches provide a good indication of the products colour, you should always sight product samples before use.

BENEFITS OF BUILDING WITH TANGO BLOCKS

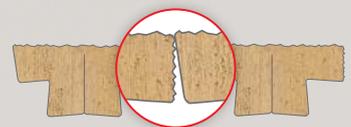

- ✓ One block does it all!
- ✓ Build directly on top of pavements – no need to excavate
- ✓ No concrete, glue or mortar needed = easy DIY

TANGO TOP TIPS

- ✓ When building retaining walls, the required set back of each course is determined by the score line on the top of each block!

- ✓ When building walls, always place the split face edges against smooth edges (don't place smooth to smooth, or split to split)

- ✓ When splitting blocks down the score line, lightly hit on all 4 sides to ensure a clean split

PRODUCT DETAILS

Tango Block

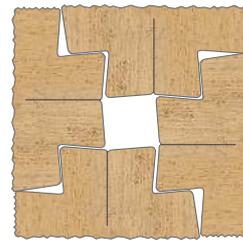

3.33 units per l/m

33.33 units per m² (single sided)

Maximum unreinforced wall height 600mm (6 courses)

Maximum unreinforced pier height 800mm (8 courses)

HOW TO LAY TANGO BLOCKS

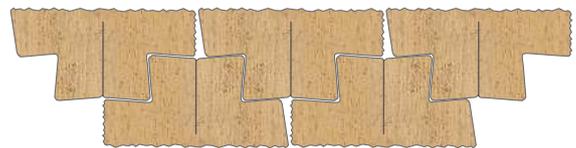

Piers

Maximum unreinforced pier height 800mm (8 courses)

Retaining walls

Maximum unreinforced retaining wall height 600mm (6 courses)

Double sided freestanding / seating walls

Maximum unreinforced freestanding wall height 600mm (6 courses)

HOW TO BUILD PIERS AND A FENCE WITH TANGO BLOCKS

STEP 1: MEASURE AND MARK OUT

Using a measuring tape, builders square and a pencil, mark out the start and end of your fence opening. These markings will be the location of your 2 piers.

STEP 2: BUILD THE FIRST PIER

Start the first course of the first pier by laying down 4 Tango blocks onto a level, flat surface. Continue by laying down the second course using the alternate pattern shown. Build to 7 courses high. Be sure to use an alternate laying pattern for each course.

First / odd course laying pattern

Second / even course laying pattern

STEP 3: BUILD THE SECOND PIER

Construct the second pier by following step 2 above.

STEP 4: FINISH YOUR PIERS

Finish your piers off by using landscape grade adhesive to fix down a Quadro® paver on top of the pier as a cap.

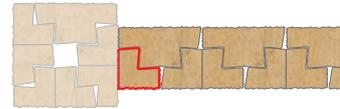

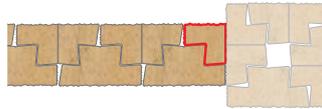

STEP 5: SPLITTING BLOCKS

Before you start your wall you will need to split a few Tango blocks in half to create two L-shaped pieces which are used for corners and ends. To do this, use a hammer and bolster and hit along the score line.

IMPORTANT: Always wear appropriate safety gear at all times when cutting blocks, that is landscape gloves and eye protection as a minimum.

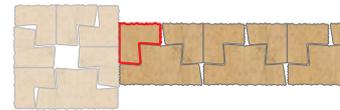

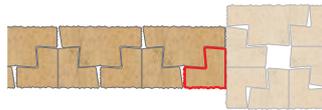

STEP 6: STARTING THE WALLS

Continue laying the first course of blocks to the desired length of your wall using the pattern seen below. This is the pattern to use for the first course, and then all of the odd courses to the finished height of wall.

STEP 7: CONTINUE CONSTRUCTING THE WALLS

Start laying the second course of blocks to the desired length of your wall using the pattern seen below. This is the pattern to use for the second course, and then all of the even courses to the finished height of wall. Finish building walls to the required length and height of your project.

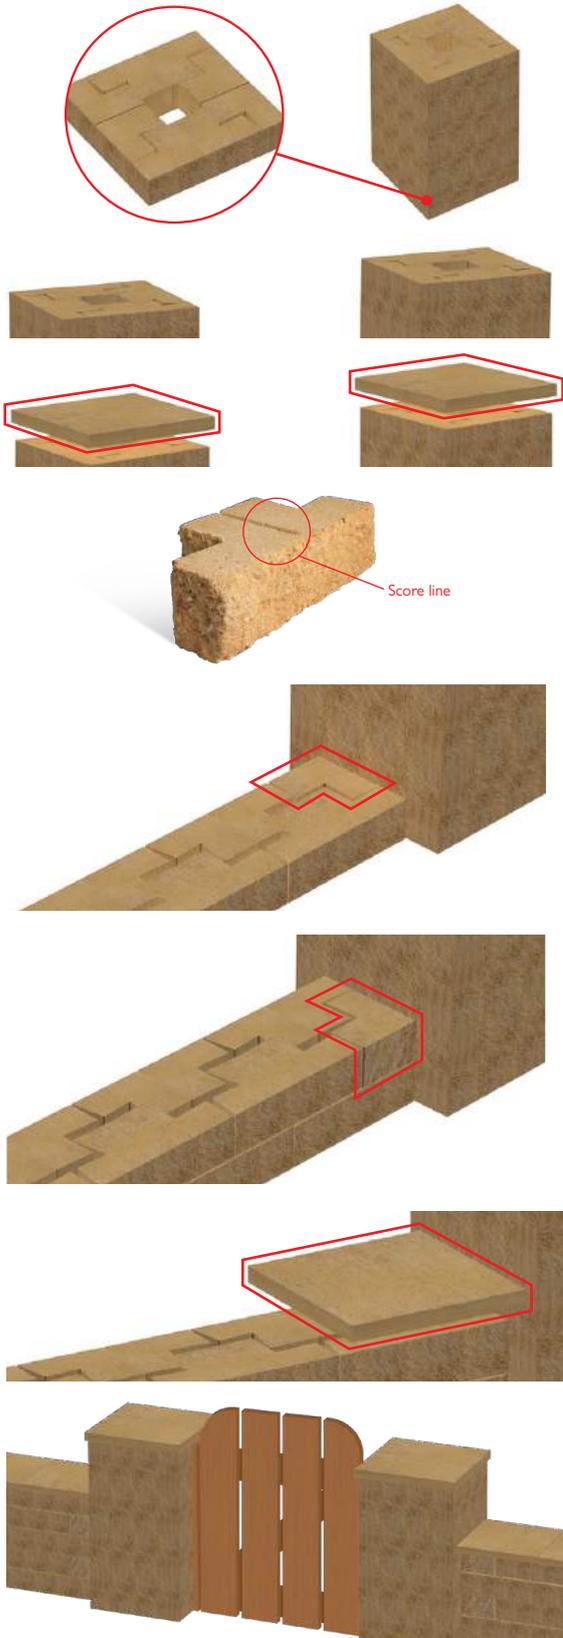

STEP 8: FINISHING THE FENCE

Finish the fence by capping the tops of the walls using Adbri Stradapave® pavers. There will be some overhang on either side of the wall, this is normal and provides a neat shadow line to walls. To fix pavers down as caps, apply a continuous line of landscape grade adhesive along the front and backs of the blocks and then firmly place down pavers and allow to set.

STEP 9: AFFIX A GATE

You're almost finished! As the Tango blocks have a "split face" texture, before hanging a gate it is imperative to fix two pieces of timber to the outsides of both piers (so the timbers face each other). Then, fix the hinges into the timber on one side and then latch into the timber on the other side of the opening. Once this is completed, choose a gate and follow instructions to hang the gate.
